Match Odds , Bookmaker and APIs changed in apis Response

We get api response in array of JSON ENCODED string so please change in JSON DECODE of string

Example :- APIs Response :

Please use JSON_Decode in your project according to use language

```
PHP : $jsonobj = '{"Peter":35,"Ben":37,"Joe":43}';
```

```
var_dump(json_decode($jsonobj));
```

```
NODE :const text = '["Ford", "BMW", "Audi", "Fiat"]';  
const myArr = JSON.parse(text);
```

Notes:

- 1) Hit Match Odds & Session API only 5 time in one second. Do not send One by one market Ids in a single request. Send multiple Market IDs , Bunch of market ids like 25 to 30 market ids in one request, You can send multiple requests as well 4 to 5 in a second.
- 2) Minimum Requirement-> Linode Or Digital Ocean 4GB, Dedicated Server only, with Static IP only.
- 3) Call From your allowed server IP only. Dont call from Local
- 4) Don't Call direct URLs, write some programme function in the back end to fetch data from your allowed server in your DB system, after that show on your system. Use some memory base database for faster data fetch, specially for live odds/rates.
- 5) Only Odds/Session Bhav/Rates giving urls need to be called in seconds. Others need not to call per second because they don;t change in seconds and are affected only once in a day or hours.
- 6) Like Sports, Series, Matches, markets Listing. You shall call as per requirement. When Admin users want to open a match, call at that time. Click Sports, Click Series, Click Match, Click market etc.
- 7) Filter Session & Fancy --> For example

```
gtype "session"  
gtype "fancy1"
```

Ball Sess-> 1 main sessions

Ball Sess 2 & 3 others ball by ball and over by over

Sr no-> 8 -> Player Boundries (S Dhawan boundries)

Sr no-> 1 -> main Over Runs (10 Over Run IND)

Sr No -> 2 -> 1.3 Over run Ind, 1 over run ind

Sr no-> 5 -> Fall Of wkts (Fall Of 1st wkt)

Sr no -> 6-> Player Run (S Dhawan Run)

Sr no-> 10-> balls face by playername (How many balls Faced by S Dhawan)

Sr No-> 4 -> main Over runs (50 Over Runs Adv , 35 over Run etc)

Like this you can check in API response more about this and check which type of fancy you get which params
